

Task 1

The following scatter plot displays the relationship between petal length and petal width from the Iris dataset, with blue markers.

Task 2

The histogram below shows the distribution of sepal length with 20 bins and black borders around the bars.

Task 3

The following Python code defines a method to print out the initials for a given employee.

```
class Employee:
    def __init__(self, first, last):
        self.first = first
        self.last = last

    def initials(self):
        return self.first[0].upper() + self.last[0].upper()

# Example usage
emp = Employee("john", "doe")
print(emp.initials()) # Output: JD
```

Task 4

The following Python code defines a method that accepts a variable number of sales data inputs and generates an attribute called 'max_sale' with the maximum value.

```
class Employee:
```

```
def __init__(self, first, last):
    self.first = first
    self.last = last

def initials(self):
    return self.first[0].upper() + self.last[0].upper()

def add_sales(self, *sales_data):
    self.max_sale = max(sales_data)

# Example usage
emp = Employee("john", "doe")
emp.add_sales(200, 400, 300)
print(emp.max_sale) # Output: 400
```
